Summary

Computer Science Engineering student with strong interest in Data Analytics and Machine Learning. Skilled in SQL, Python, Excel, and Power BI with hands-on experience analyzing datasets, building analytical models, and visualizing meaningful insights. Experienced in data preprocessing, exploratory data analysis, and statistical modeling through project-based learning. Passionate about transforming raw data into actionable insights to support data-driven decision making.

Skills

Programming & Querying: SQL, Python

Python Libraries: Pandas, NumPy, Matplotlib, Scikit-learn

Data Visualization Tools: Advanced MS Excel, Power BI, Tableau

Analytical Abilities: Data Cleaning, Exploratory Data Analysis (EDA), Insight Generation, Descriptive Statistics

Experience

Android Developer Intern

Apr 2025 – May 2025

Ideas2IT Technology Services Private Limited (On-site)

- Developed Android application features using **Kotlin** while following modern Android architecture principles to ensure scalable and maintainable code.
- Integrated backend communication using **REST APIs with Retrofit**, enabling efficient data retrieval and seamless interaction between mobile applications and backend systems.
- Designed responsive and intuitive user interfaces using **Jetpack Compose**, improving usability and overall user experience.
- Collaborated with team members using **Git and GitHub** for version control, code reviews, and coordinated feature development.
- Participated in debugging, testing, and performance optimization to enhance application stability and functionality.

Projects

Netflix Recommendation System using SVD | *Machine Learning Project*

- Developed a movie recommendation system using **Singular Value Decomposition (SVD)** to identify latent relationships in user rating data.
- Implemented collaborative filtering techniques to generate personalized recommendations based on user viewing history and preferences.
- Performed dataset preprocessing including cleaning, normalization, and transformation using **Python**.
- Evaluated recommendation results by analyzing user-item interaction patterns and improving prediction accuracy.

Support Vector Machine Classification Model | *Machine Learning Project*

- Developed a classification model using the **Support Vector Machine (SVM)** algorithm to classify data points based on feature patterns.
- Performed feature engineering and preprocessing to enhance model accuracy and improve classification results.
- Evaluated model performance using validation metrics including accuracy score and confusion matrix.
- Visualized classification outcomes to interpret model decision boundaries and analytical insights.

Time Series Analysis and Forecasting | *Data Analytics Project*

- Conducted time series analysis to identify **trend, seasonality, and temporal patterns** in time-based datasets.
- Applied forecasting techniques to predict future values and analyze potential data trends using statistical methods.
- Visualized temporal datasets through analytical charts and statistical plots to support interpretation.
- Generated insights from time-based data to support predictive analysis and informed decision making.

Certifications

- **Professional Certification Program in CSE with Artificial Intelligence and Data Science** — Intellipaat in collaboration with IIT Roorkee covering Machine Learning, AI, and Data Analytics concepts.
- **PCAP: Programming Essentials in Python** — Cisco Networking Academy & Python Institute (Nov 2024) covering Python programming, OOP concepts, modules, and data structures.

Education

B.Tech in Computer Science and Engineering

Christ University, Bangalore

2023 – 2027

CGPA: 8.42 / 10
